

Assistant Store

The platform to find and connect with your Assistant

Assistant store will be composed of :

- an Assistant Factory where Assistant creators will be able to craft their own Assistants with realistic voices and profound descriptions, and
- an Assistant Store where users will be able to search and buy Assistants with which they will be able to interact afterwards.

This is an example of the Assistant Factory where you can rewrite the instructions of your Assistant and give them voices by providing the characteristics you want.

The screenshot shows a web browser window with the URL <https://assistant-store.streamlit.app>. The browser's address bar and various extension icons are visible at the top.

On the left side, there is a sidebar titled "Assitant Factory" (note the typo). Below the title, it lists "Commands:" with two entries: `/instructions : rewrite the instructions of your assistant` and `/voice : choose the characteristics of your assistant's voice`. At the bottom of the sidebar, it says "When you are ready save your Assistant" and includes a "Save" button.

The main area of the application displays a chat history with alternating messages from a user (red icon) and an assistant (yellow icon):

- User: hello
- Assistant: Hello! How can I help you today?
- User: /instructions You are a professional translator. Translate the following text to French:
- Assistant: New instructions have been copied to memory
- User: Hello
- Assistant: Bonjour

Below the "Bonjour" message, there is a media player showing a duration of 0:00 / 0:00, a progress bar, a volume icon, and a settings menu icon.

At the bottom, there is a text input field labeled "Your message" with a send button (a right-pointing arrow) to its right.

I don't currently have a PoC of the Store but the idea is that it looks like the App Store with a Search option, Today's most popular Assistants and list of Assistants you can buy.

Thank you!
