your compassionate companion.

PROBLEM STATEMENT

to identify the issue that is a concern and focus it in a way that allows it to be studied in a systematic way.

OUR IDEA.

provides the vision and direction
for successful execution and
innovation.

Purpose: The main objective of AmiMind is to help Alzheimer's patients retain access to their memories and personal information in a user-friendly manner.

When users enter the app, they are prompted to upload a PDF document containing their memories, personal information, and important details about their life. This PDF serves as a digital repository of their memories.

Once the PDF is uploaded, the app utilizes artificial intelligence, specifically Rag AI (Recurrent Aggregated Graphs), to analyze and understand the content. This AI-powered system then creates a personalized schedule for reminiscence reminders.

amimind

At regular intervals, the app sends reminders to the user, prompting them to revisit their memories. These reminders could include specific events, photos, or anecdotes from the user's life, extracted from the uploaded PDF.

Vectara Integration: Vectara, the platform used to build AmiMind, provides a robust framework for creating interactive and dynamic web applications. It offers features for seamless user experience and efficient data processing, essential for a project like AmiMind.
