Shaping better software: The benefits of effective code ...

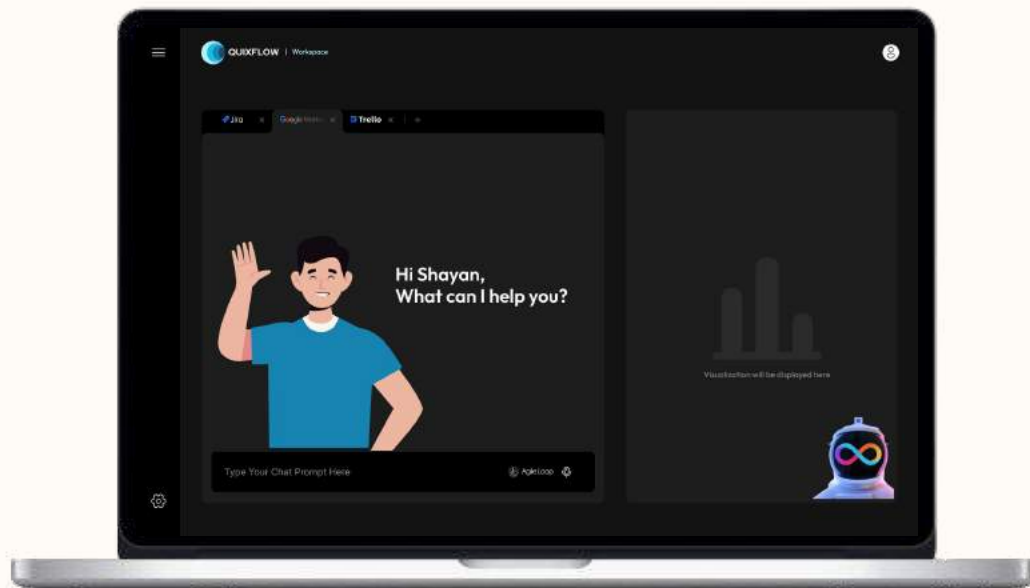

18 Okt 2023 — Effective code documentation is **an informative technical guide**, ensuring end user can read and use the code base. It also reduces the margin ...

Our cutting-edge automation system for Jira and Notion leverages advanced voice recognition technology, powered by Synapse Copilot and OpenAI models, to enable users to create tasks, issues, tickets, and visualizations seamlessly through voice commands. This innovative approach aims to **enhance productivity, reduce manual effort, and streamline workflow** management.

With the potential to revolutionize the way organizations manage their projects and tasks, our system is poised for significant growth and market adoption. We are seeking venture capital funding to scale our operations, enhance our technology, and capture a significant market share in the project management software industry.

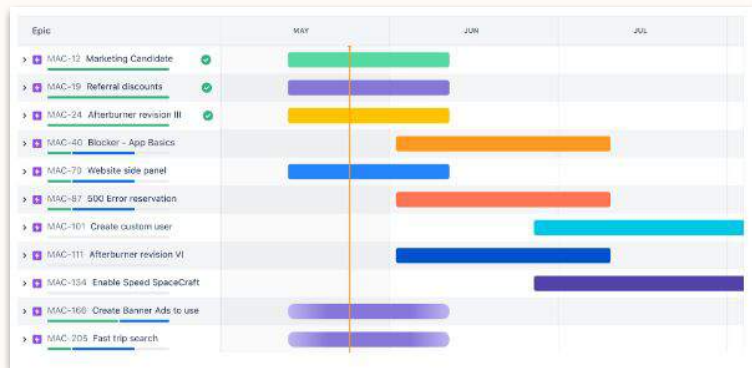

"Enabling SaaS Cross-Platform Collaboration Through AI"

Quixflow will help identify which developer is available to complete a 2-story point task **FASTER!**

Current Flow:

1. PM needs to explore the JIRA tasks/Projects
2. Configure certain filter parameters
3. Gantt Chart Visualization appears
4. PM needs to manually analyze the gantt chart and determine the answer.

(Approximate Time to get the answer = 10-20 mins)

**QUIXFLOW**

1. Type "Which developer can complete my 2 story point task within this quarter?" in Quixflow Prompt Chat
2. Prompt Chat will analyze the gantt chart and JIRA
3. **Prompt Chat Answers "The approximate Devs who will be available are X1, X2, X3...."**

(Approximate Time to get the answer = 1-3 Mins)

**10x Times Faster!**

Create a ticket

Current Flow:

1. PM created a requirements list on Notion
2. Devs need the JIRA tickets to execute the ticket (Dev's Policy)
3. PM copy & paste the Notion contents in JIRA ticket
4. ✨ JIRA Created ✨

(Approximate Time to get the answer -> 5 - 10 mins)

QUIXFLOW

Notion

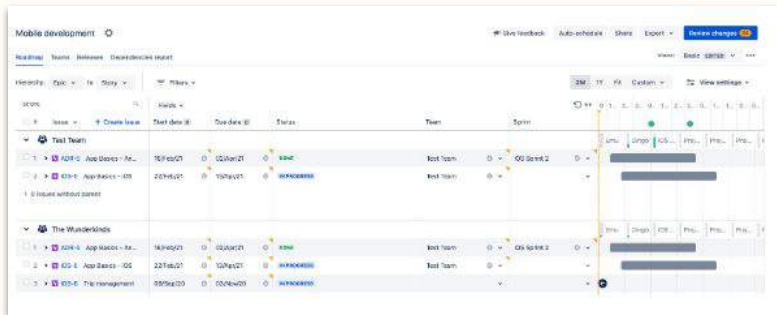

Jira

1. Initial Requirement that is written in Notion
2. Hi Quixflow - "Please convert this Notion into JIRA ticket"
3. Quixflow converting
4. ✨ JIRA Created ✨

(Approximate Time to get the answer -> 1-3 Mins)

**10x Times Faster!**

Create a bug/error tickets

Current Flow:

1. Use Diagnostic Tools
2. Capture the Logs
3. Create a ticket and write the repro steps
4. Upload Screenshot
5. Determine whose Dev's department for check (e.g Marketplace, Seller, Checkout, etc)
6. Create a ticket

1. Use Diagnostic Tools
2. Press Report Button! Or Copy the "Action Code" - X9382-AIRU#-85733 and paste on Quixflow prompt chat
3. JIRA Ticket created along with the details!

Why Should Developers and Non Tech People Use Quixflow?

Unmatched Productivity: Quixflow's voice command capability significantly reduces the amount of manual data entering, freeing up your staff to concentrate on the important tasks at hand.

Exceptional Precision: Automation guarantees that tasks, tickets, and documents are generated precisely, reducing mistakes and rework.

Easy Integration: It interfaces with Jira and Notion with ease, allowing you to improve your present tools without interfering with your workflow.

Time-Saving Automation: Frees up your team's time to concentrate on key projects by automating repetitive and time-consuming chores.

Intuitive User Experience: Simplifying interactions with complicated systems, the chat prompt box's user-friendliness increases user happiness and adoption.

Leaderboard Ranking System: providing a bonus structure for top performers, rewarding them for resolving issues, and creating a competitive yet cooperative atmosphere.

Robust and Scalable: Quixflow is made to grow with your company's needs thanks to its foundation on cutting-edge technologies like Vite, Django, React, and SQLite.

Improved Collaboration: Promotes improved teamwork and quicker project completion by streamlining task management and communication between teams.

Cost-Efficiency: Helps reduce operational costs and improves your bottom line by eliminating the need for manual task management and minimizing errors.

Customizable Workflows: These workflows may be tailored to your specific business operations, making them an ideal fit for your company.

Minimal Learning Curve: Quixflow's user-friendly design means that it takes little training, so your team can get started right away and start producing results right away.

Secure Data Management: Provides users with peace of mind regarding the security of their data by making sure that all of their data is maintained and stored securely.

Dream Outcome of Quixflow

Change Your Workflow: Quixflow's voice command functionality lets you create tasks and manage projects easily, hands-free, for an unmatched level of productivity.

Attain Unmatched Precision: AI models take care of the specifics. They will make sure that each task, ticket, and document is prepared precisely, minimizing errors and increasing efficiency.

Take Back Your Time: Automate time-consuming chores and concentrate on what really counts. Your team can focus their efforts on high-impact tasks with Quixflow, producing tangible outcomes.

Improve Team Performance: Quixflow's smooth automation can help your team function at its best by managing and completing tasks more quickly and precisely.

Making Informed Decisions at Every Step: With visually striking dashboards and reports, you can instantly get insights into the performance and development of your projects, allowing you to make informed decisions at every step.

Visualize Success: Easy-to-understand dashboards and reports that are visually appealing give you immediate insights into performance and progress, enabling you to act swiftly and decisively.

Quixflow is not designed to replace your existing SaaS solutions; rather, it is engineered to **enhance the overall workflow of activities.**

Voice Commands:

Create tasks, issues, and tickets, as well as generate visualizations, using natural language voice commands.

Seamless Integration:

Integrates directly with Jira and Notion, ensuring compatibility and ease of use.

Advanced AI Models:

Utilizing Synapse Copilot and OpenAI models, our system accurately interprets and executes user commands.

Real-time Updates:

Tasks and issues are updated in real-time, ensuring that all team members have access to the latest information.

User-friendly Interface:

The intuitive interface ensures that users can quickly adopt and utilize the system without extensive training.

Market Size & Opportunities

The global project management software market is projected to reach **\$15 billion by 2025**,

with a compound annual growth rate (CAGR) of 10.2%.

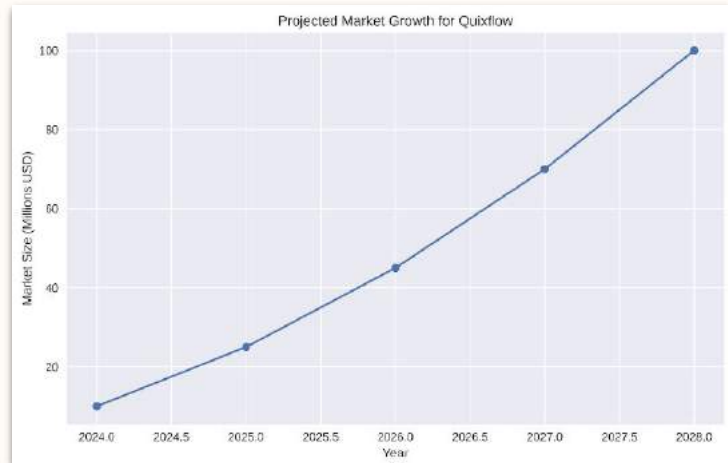

Quixflow aims to have 1 Million Users by 2030

Revenue Model

Subscription Plans: Tiered subscription plans based on the number of users and features.

Enterprise Licensing: Customized solutions for large organizations with specific needs - Fine Tuning the SaaS integration and special functions

Professional Services: Consulting and Integration services to help organizations implement and optimize the system

Expanded Integrations:

Integrating with other popular PM and collaboration tools such as Trello, Asana, Salesforce / Zoho and Microsoft Teams.

Enhanced AI Capabilities:

Continuously improving our AI models to support more complex commands and use cases.

Mobile Application:

Developing a mobile app to provide on-the-go access to our voice-activated system.

Global Expansion:

Targeting international markets to expand our user base and increase market penetration.

AI-Powered Insights:

Offering advanced analytics and insights based on user interactions and project data.
